Software Engineer with experience as Full Stack Web Development with over 6 years of experience in website development across various sectors such as Industry, E-commerce, Consulting, Real Estate, and others. Proficient in WordPress, WooCommerce, PrestaShop, Moodle, and VueJS, utilizing programming languages such as PHP and JavaScript. Additionally, I have developed Web Apps using VueJS, Firebase, and NodeJS. I am also familiar with frameworks like ReactJS for Front-End development, and Express and Symfony for Back-End development. In terms of databases, I have worked with MySQL, Firestore, and MongoDB. I consider myself passionate about technology, continuous self-learning, and strive to enhance both my technical and soft skills. I am currently seeking an opportunity where I can leverage my talents, contribute to the development of innovative solutions, and embrace new challenges.

### EXPERIENCY

#### VINALI GROUP., WEB DEVELOPER — *july, 2023 - current*

- I brought creative ideas into building websites.
- I brought creative and functional ideas in the management of email marketing and internal processes.
- I developed and put into production the company's website.
- I provided timely support on weak features on the company's websites.
- I managed the Hosting service where all websites are hosted, setting up firewalls, dns, backups among other functions.
- I have developed plugins for specific uses on websites, such as: Contact Data, CPT, CF, Data Import, among others

**Stack tecnológico:** LAMP, WordPress, Oxygen Builder, GodDaddy, among others.

#### MANDOLINA SAS., FULL STACK WEB DEVELOPER — *Apr, 2022 - Apr, 2023*

- I optimized the source code by addressing multiple lines that required attention. This improved the website's performance and code reusability for future requests.
- I modularized the template to make the development process more efficient. By modularizing sections of the views, it helped facilitate new implementations and avoid reprocessing.
- I implemented various functionalities using Custom Post Types (CPT) and taxonomies. This expanded the website's capabilities and added attractive elements for visitors.
- I improved performance as the website was scoring low in speed analyzers. With the acquisition of a tool, it was implemented on the server to enhance code optimization and image rendering.
- I provided efficient support for minor contingencies that arose. By being attentive to minor situations, difficult-to-solve issues were successfully avoided.

**Stack technological:** LAMP, SASS, WP-Engine, WP-Rocket, in others.

#### EN ALGÚN LUGAR ESTUDIO., FULL STACK WEB DEVELOPER — *Ago, 2020 - Jun, 2022*

- I developed an initial version of the password manager app using VueJS and Firebase. The project was initiated after detecting that users were storing passwords in plain documents without any protection. I developed the application to prevent the loss of this data and improve its accessibility.
- I enhanced the website creation method by implementing more optimized technologies such as SASS and Babel. This improved the rendering of websites with cleaner CSS and JS code.
- I pioneered the use of a WordPress website builder to standardize the websites for different company clients. This standardized the front-end development of the implemented websites.
- I developed better-structured VueJS projects with cleaner, modularized, and reusable code.
- I optimized the Digital Ocean service where VueJS applications and websites were hosted. Since it lacked strong security levels, I strengthened the Linux firewall and structured the folders to make scanning more difficult. This effort prevented access by malicious individuals.
- I improved the contact form system for VueJS websites. Since there was no standard for receiving and storing contact data, I developed a better-structured system for this purpose.

- I implemented the use of Google Analytics and Google Search Console to analyze the monthly traffic of various websites. This generated credibility among clients regarding the company's expertise in web development.

**Stack technological:** LAMP, FireBase, Digital Ocean, WordPress, Woocommerce, Prestashop y Moodle.

## PROJECTS.

**Quality Creations Agency – Web developer** - Feb, 2021 – actual

- I developed websites for several clients of the company, increasing customer satisfaction within the agency and improving business sales.
- I conducted SEO analysis for the company and its clients, aiming to measure website visits and published content.
- I provided consultations and advice on web issues and implementations for clients, resulting in an 80% increase in sales and the business gaining credibility and positioning.

**Stack technological:** LAMP, WordPress y SEO.

**Research Seedbed at the Ibero-American University. –Full Stack Web Developer** - Feb, 2023 – actual

- Development of an application for research project applications for university users. The application was developed using ReactJS on the front end and NodeJS - Express on the backend.

## SKILLS
